Applicant's election without traverse of Group III, claims 23-26, in the reply filed on 25 July 2006 is acknowledged.

Claims 1-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 25 July 2006.

Claims 23-26 are objected to because of the following informalities: The instant claims depend from non-elected claims 1, 2 and 11. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 23-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Enenkel et al.

(A, newly cited)

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Claim 23 is drawn to a process for selecting a host cell which expresses a protein or product, which process comprises: cultivating eukaryotic host cells which comprise a vector comprising a gene for the protein or product driven by a hamster-ubiquitin/27a-promoter, a gene which codes for a fluorescent protein and an amplifiable selectable marker; followed by identifying or selecting cells which show the highest fluorescence. Claim 24 recites further that FACS is employed for the cell selection. Claim 25 recites subjecting the cells to one or more rounds of gene amplification using an amplifying agent. Claim 26 specifies that the amplifiable selectable marker is DHFR and the amplifying agent is methotrexate.

Enenkel et al. teaches, e.g., at the Abstract, methods of generating genetically modified mammalian host cells, specified at paragraph [0083] as making use of hamster ubiquitin S27a promoter, further specified at paragraph [0088] as having an additional marker which is fluorescent, particularly GFP, and sorting the cells using FACS. Paragraph [0071] further teaches the use of an amplification step using DHFR gene as the amplifiable marker and methotrexate as the amplifying agent.

Art Unit: 1636

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 25 and 26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 25, and therefore claim 26 which depends therefrom, recites “one or more additional gene amplification steps”. However, the word “additional” is confusing as there was no antecedent recitation of any gene amplification steps.
